PORTABLE PHLEBOTOMY LOUNGER

An innovative fully functional portable lounger ideally suited to the blood transfusion services.

At a mere 12.5 kg (27.5lbs) it is lightweight, yet with a safe load capacity of 150kg (331lbs) is very robust. It is ergonomically designed for ease of use by staff without forfeiting the comfort of donors. Its renowned stability promotes the sense of security for the donor and combined with its versatility can be easily adjusted through 4 tilting positions including the Trendelenberg position.

Safety features include the positive locking system on all 4 tilting positions, the front support leg and the safety strap make this lounger safe to use without restricting its functionality. Its versatility is paramount in its many adjustments, from arm rest height and angle to the adjustable head cushion and seat tilting positions. Padded head, arm, seat and ankle cushions ensure maximum comfort without compromising portability. This is evident in its small folded volume which allows for ease of packing and handling and quick to setup.

Designed by mechanical engineers for portability, versatility, functionality, safety & comfort.
